EDUCATION

University of Maryland Baltimore County **Graduation Date: May 2025**
Master of Science in Computer Science GPA: 3.81/4.0

Vasavi College of Engineering **Graduation Date: May 2023**
Bachelor of Science in Computer Science GPA: 3.6/4.0

EXPERIENCE

Software Engineer, Lexsy.ai **July 2025 – Present**

- Building and scaling a legal-tech automation platform with a microservices architecture (Node.js, Express, PostgreSQL, Docker, Temporal).
- Developed secure, role-based client and lawyer workflows, enabling automated compliance document generation (Stripe, DocuSign, Dropbox integrations).
- Designed RESTful APIs and inter-service communication protocols to streamline onboarding, engagement agreements, and regulatory filings.
- Improved front-end experience by implementing responsive React/Next.js components with real-time workflow tracking.

Software Engineer, University of Maryland Baltimore County **Aug 2024 – May 2025**

- Developed Campus Pantry, a real-time meal-reservation platform that optimized data retrieval and reduced latency, indirectly supporting responsive information searches for over two thousand users.
- Engineered a high-performance, React and TypeScript frontend with Redux and Google Maps integration, ensuring mobile loads under one second. .
- Designed REST and GraphQL APIs with Node.js, Express, PostgreSQL, implemented JWT role-based auth, and sustained about 3000 reservation requests per day with an error rate under one percent.
- Containerised services in Docker and wired a GitHub Actions CI/CD pipeline for blue-green deployments on AWS EC2 and RDS , added OpenTelemetry and Grafana monitoring that cut average API latency from 450 ms to 180 ms.

Full Stack Developer, Polycom Inc **April 2022 – May 2023**

- Redesigned a hospital dashboard using React and TypeScript to enhance user experience and improve load times by 35%, emphasizing efficient data processing and performance optimization.
- Developed secure APIs in Node.js for patient scheduling and reports, using JWT/OAuth for login and data protection.
- Containerized applications using Docker and orchestrated Kubernetes deployments with auto-scaling and smooth update mechanisms, demonstrating expertise in distributed systems and performance tuning.
- Added an AI-powered feature that suggests diagnosis codes using a BERT model, reducing manual work for doctors by 22%

PROJECTS

Pretty Prompt

- Developed a Next.js and Tailwind CSS frontend with a FastAPI backend and Groq integration to rewrite, shorten, lengthen, and retone prompts using multiple LLMs, with real-time scoring and comparison.
- Implemented user authentication, prompt history, and template CRUD using NextAuth, Prisma ORM, and Supabase/Postgres, with full CORS support and responsive UI controls for seamless prompt management

Voice-Powered Chrome Extension

- Built Web Talk at HackHound2025 a hands-free web browsing Chrome extension that converts speech to text (WebSpeechAPI) and routes commands through Groq + Gemma2-9b-it LLMs.
- Executes tab/page actions via Chrome Tabs & Scripting APIs under ManifestV3, summarizes and answers question about the page. Further roadmap includes multilingual input and TTS feedback.

Anonymous Grading system

- Developed a Java-based grading system that automated exam evaluations using barcode scanning and student-ID mapping, boosting grading speed by 60%.
- Built a secure backend with AWS Amplify, Cognito, GraphQL, and DynamoDB, reducing manual grading errors by 80%.

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, Bash, SQL
Core Computer Science: Data Structures, Algorithms, Operating Systems, Networking, Software Development Life Cycle
Frontend Technologies: Next.js, React.js, Vue.js, HTML5, CSS3, JavaScript, TypeScript, Tailwind CSS, Redux, Vuetify,
Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, ElasticSearch, OpenSearch, Supabase
Backend Technologies: Node.js, FastAPI, Flask, Django, Spring, MVC, RESTful APIs, GraphQL, Redis, Kafka
Cloud & Infrastructure: AWS (EC2, S3, RDS, Lambda, CloudFormation, Amplify, Cognito, API Gateway, SQS), Azure , GCP
CI/CD & DevOps: Git, Docker, Kubernetes, Docker Compose, GitHub Actions, Jenkins, GitLab CI, Terraform
AI/ML: OpenAI Groq APIs, LLMs, Prompt Engineering, BERT, Pydantic, Agno, LangChain, LlamaIndex, PyTorch, TensorFlow, Keras
System Design & Architecture: Microservices Architecture, High Availability Systems, Scalability, Fault Tolerance, API Design, Security, Application Resiliency
Other Tools & Integrations: Prisma ORM, OpenTelemetry, Grafana, NextAuth, Chrome Extensions (Manifest V3), Vercel, Render
Operating Systems: Linux, Windows, macOS

CERTIFICATES

- Explore React.js Development — Issued by LinkedIn Learning
- JavaScript Foundations Professional Certificate — Issued by Mozilla
- Career Essentials in GitHub Professional Certificate — Issued by GitHub
- AWS Academy Graduate – Cloud Foundations — Issued by Amazon Web Services (AWS Academy)
- Docker Foundations Professional Certificate — Issued by Docker
