Professional Summary

Forward-Deployed AI/Software Engineer with 5+ years of hands-on software development across professional, graduate, and product environments. Experienced in **embedded engineering**, building client-facing and internal AI agent platforms, RAG systems, and workflow automation from ambiguous requirements through production deployment. Strong in **Model Context Protocol (MCP)**, multi-agent architectures, AI FinOps and cost governance, and enterprise controls including RBAC, tenant isolation, audit trails, and human review.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL
AI / Agent Platforms: Claude Managed Agents, OpenClaw, Model Context Protocol (MCP), multi-agent orchestration, agent frameworks, tool calling, RAG, embeddings, LangChain, LlamaIndex, OpenAI, Gemini, Groq, structured outputs, evaluations, and guardrails
Application / Data: React, Next.js, TypeScript, Node.js, Express, FastAPI, REST APIs, GraphQL, Webhooks, PostgreSQL, Supabase, MySQL, MongoDB, Redis, Elasticsearch
Cloud / AI: AWS, Docker, Kubernetes, GitHub Actions, CI/CD, OpenTelemetry, Grafana, model routing, token and cost telemetry, rate limits, RBAC, tenant isolation, audit logging, approval workflows, secure API design, and compliance-minded controls

Experience

Software Engineer, AI Products - Founding Engineering Team **Jul 2025 - Present**
Lexsy.ai - AI-Native Legal-Tech Automation Platform *Remote*

- **Forward-deployed and embedded** with lawyers, legal operators, and founders to convert ambiguous incorporation, fundraising, equity, hiring, cap-table, and e-signature workflows into a production AI platform using **React, TypeScript, Supabase/PostgreSQL, and Deno Edge Functions**.
- Built an **internal AI platform and multi-agent architecture** on **Claude Managed Agents and OpenClaw**, using **Model Context Protocol (MCP)** and agent frameworks with approximately **20 consolidated MCP tools** (read/write separation, role-based access, tenant isolation, approval gates, structured outputs).
- Designed and shipped **internal tools and automation used by other teams**, including three role-scoped internal agents (**CTO, COO, Growth**) that support engineering, operations, and growth workflows through role-specific tools, isolated workspaces, and human oversight.
- Built **RAG systems** over client data rooms using document parsing, chunking, vector embeddings, semantic retrieval, and source grounding, plus automated document classification and data-room organization (**LexsyScan**) for meaning-based search and structured extraction.
- Implemented **AI FinOps and cost-governance controls**, including model routing, token and usage telemetry, rate limits, evaluation traces, and cost-aware fallbacks to control and monitor AI spend across agent workloads.
- Enforced **enterprise governance, audit, and compliance controls**, including **RBAC, tenant isolation, audit logging, and mandatory human review gates**, supporting **SOC 2 compliance requirements** across a multi-tenant legal-data platform.

Graduate Software Engineer, Campus Systems **Aug 2023 - May 2025**
University of Maryland Baltimore County *Baltimore, MD*

- Built Campus Pantry, a real-time reservation and inventory platform supporting approximately 3,000 daily requests with an error rate under 1%, using React, TypeScript, Node.js, PostgreSQL, GraphQL, and AWS.
- Worked directly with pantry staff and administrators to translate operational constraints into role-based workflows, secure authentication, inventory-aware request handling, and AI-assisted search and demand insights.

- Improved production reliability with Docker, GitHub Actions CI/CD, monitoring, query optimization, and backend profiling, reducing average API latency from 450 ms to 180 ms.

Software Engineer **Apr 2022 - May 2024**

Polycom Inc - Enterprise Workflow Systems *India*

- Built **internal tools, platforms, and workflow automation** for scheduling, reporting, and structured records, owning features across frontend interfaces, backend APIs, authentication, data models, and deployment pipelines.
- Developed secure REST services with RBAC, input validation, audit-friendly request handling, and reliable data flows; improved dashboard performance and reduced page-load time by 35%.
- Contributed to a BERT-based classification workflow that recommended structured codes and reduced repetitive manual review effort by 22%.

Selected AI Projects

Pretty Prompt - AI Prompt Optimization Platform *Next.js, FastAPI, Groq, Prisma, Supabase*

Built an authenticated prompt workspace for rewriting, scoring, version comparison, reusable templates, prompt history, and persistent model workflows.

Web Talk - Voice-Powered AI Browser Assistant *Chrome MV3, Web Speech API, Groq, Gemma2-9B*

Converted spoken commands into structured LLM intent for webpage navigation, summarization, page-specific Q&A, and browser actions through Chrome Tabs and Scripting APIs.

Education

Master of Science in Computer Science **May 2025**

University of Maryland Baltimore County - GPA: 3.81/4.0 *Baltimore, MD*

Bachelor of Engineering in Computer Science **May 2023**

Vasavi College of Engineering - GPA: 3.6/4.0 *India*
